

JGHK Multiple Shift by James Kim - Video - DOWNLOAD

The **JGHK Multiple Shift** is a multiple card control executed in the action of squaring up the deck.

It can be used to shift multiple cards either to the top or to the bottom of the deck. The **JGHK Multiple Shift** does not require a cut or a shuffle which makes it stand out among other multiple shift methods out there.

Also, it is not a knacky move meaning that if you follow the explanation step by step, you will see for yourself how logical it is. Of course, making it look smooth and flawless will require practice.

The instructional video is a 60 minutes long and includes a video that explains how I developed the technique, the in-depth explanation of the sleight, subtle touches, multiple replacement covers, and the solutions to the problems that you might have along the way of mastering this sleight!

Download it today.
