

## Totally Impossible Location Again (video and PDF) by Unnamed Magician - Video - DOWNLOAD

This has fooled some of the biggest minds in card magic. A completely brand-new method of locating a selected card that you've never seen before.

There is no peek and there is no force, the deck is shuffled before and after the selection ... yet the card can be located. There is a full performance video by Christian Grace attached above.

In brief, the spectator thoroughly shuffles the deck, after which they cut to a card. They then replace the cut and immediately shuffle the deck again. The magician then locates the merely looked-at card.

Some important conditions of note:

- The spectator shuffles the ENTIRE deck at the beginning of the effect.
- At the end of the effect, before the magician locates the selected card, the spectator gives the deck some legitimate riffle shuffles.
- The magician doesn't know what the selected card is until he looks through the deck at the end - so there is no peek and there is no force. There are no crimps or short / long cards - there is absolutely nothing that forces the spectator to cut to a particular card.
- You will learn a method (to locate a selected card) that you've never seen before. Forget about all the traditional methods you know ... this is something totally different.
- You will receive both written instructions (PDF) and video instructions.
