

Easy Fold by Matthew Wright

The Mercury Folded Card has been used as a reveal for some of the greatest card tricks ever created. Many of the biggest names in magic have added some kind of folded card production into their repertoire and dozens of ingenious devices have been invented making use of the Mercury Folded Card. Thousands of magicians have invested in these creations only to see them tossed into "The Bottom Drawer" because of one issue they all share... The Mercury Folded Card is a difficult thing to master when under pressure in a real-world performing environment.

Easy Fold is designed to help solve that problem.

East Fold is a hidden in plain sight gimmick that allows for a much cleaner, more precise, less pressured card fold to be made under real world performance conditions. All heat is taken off the move as it is done after the cards are returned to the card box. The design of the gimmick allows the performer to take their time with the fold and gives a solid guide for the card to be pushed against while folding...making sure that the card will look much more like the neatly folded card being displayed beforehand and give you much more confidence to go out and perform in the real world.

Easy Fold comes with gimmick, downloadable instructions and creator Matthew Wrights own routine for the Mercury Folded Card. No previous experience or knowledge of Mercury Folding Cards is needed
