

Classicho Hearken Dice by TCC

Discern two dice at once and enrich effects on multiple levels.

Mental magic is a fascinating branch, and the audience is always captivated by its mysterious allure. Dice, familiar objects to everyone, play a significant role in this field.

One of the coolest dice magic props, invented by Martin Sunshine in the 1930s, is renowned for its simplicity and clever operation, making it a favorite among mentalists. Additionally, a classic magic effect in children's magic sets involves an audience member placing a die in a container, with the magician shaking it by their ear and accurately guessing the number facing up. Inspired by these two products, we created the **Hearken Dice**.

To elevate this magic effect, we increased the number of dice to two. Using a clever magic principle and a specially designed wooden box, we achieved the ability to discern the numbers on both dice simultaneously. With the combination of two dice, there are 12 possible sums and a total of 66 combinations, enhancing its versatility for mental magic. The **Hearken Dice** can be paired with card and number effects or customized using special card sets for a unique magic routine, enriching the magic effects on multiple levels. Beyond its magical properties, we are committed to making the **Hearken Dice** a beautiful collectible. We chose high-quality ebony wood and inlaid it with yellow boxwood. The 40mm dice maintain a comfortable and clear visual. The wooden box is primarily made of Cambodian Rosewood, finished to resemble Black Ebony.

Includes

- One wooden box
- One Ebony wood die
- One Bloodwood die

Specifications

- Material: Cambodian Rosewood
- Color: Ebony Black

Dimensions

- Dice: 40mm edge length
- Box: 50x95x50mm
- Lid: 61x108x16mm

Note: The above measurements are taken manually and may have minor discrepancies, which do not impact the functionality of the product.
