

## The Oddest Ball by David Penn and TCC

The **Oddest Ball** is a comedic twist on the Odd Ball effect that is sure to bring laughter and amusement to your mentalism performances.

The Odd Ball Effect has been used by many mentalists in their lie detector routines. The audience is always deeply impressed by the performer's incredible mind-reading ability.

But maybe it's time to have more fun with it. Meet **The Oddest Ball** a comedic twist on the classic effect that is sure to bring laughter and amusement to your mentalism performances.

While blindfolded, you invite your spectator to a mind-reading demonstration. They are instructed to announce "I have a ball" each time they lift a ball from a display stand. As you claim to analyze their voice patterns to detect when they pick up the red ball, tension mounts with each white ball chosen.

When the participant finally lifts the red ball, the tension gives way to uproarious laughter as an alarm sound, startling them and causing the stand to vibrate. You've successfully identified **The Oddest Ball**.

If you want an additional twist revealing your true mind-reading powers, you can involve five volunteers. Use a net change bag for them to select slips of paper—one indicating 'Red' and the rest 'White.' After the initial fun, astound the audience by correctly predicting the person who chose the oddest ball.

Crafted with precision and attention to detail, 'The Oddest Ball' features a stable internal electronic structure housed within a luxurious wooden stand made of the finest North American walnut. The set includes all necessary golf balls, though you're welcome to use balls of any color.

**The Oddest Ball** allows you to bring astonishment and laughter to your audience in a routine that will soon become a highlight of your show.

### Includes:

- Wooden display stand with lid.
- Four white balls.

- One red ball with a wire connector for comedic effect.
- Additional connect wires for the red ball.
- One red ball without the connector as an alternative.
