

Sun & Moon Mystery

The magician shows a panel (with the shape of a cloud), opens it, takes out a disk representing the sun (or, if you prefer, the moon) from inside it, and leaves the panel in sight. The magician then picks up a box with two compartments, he opens the two doors and shows it empty inside. In one compartment he places the sun and closes the two doors. The audience is asked to remember where the sun is. The box is tilted and the door of the compartment where the sun was is opened, so as to show that it has vanished! The audience, who heard the sound of the sun sliding into the other compartment, will ask the magician to open the other door. The magician closes the first door, then tilts the box again and opens the door of the other compartment to show that it is empty. He repeats the gag of sliding the sun from one compartment to another several times, until the audience asks for both doors to be opened. The magician opens them and shows the empty compartments: the sun has really vanished! Finally he makes it appear from the cloud panel that was in full view on the table all the time.

- A classic always appreciated by audiences, and loved by children.
- The artwork of the items, reminiscent of clouds, will allow you to tell a story of the sun hiding in the clouds.
- The sun has a diameter of 10.7 cm. (4,21"). The box, including the support base, measures 27.5 (10,82") x 14 (5,51") x 4.4 (1,73") cm.
