

Incredible Moving Hole

A moving hole...simply AMAZING!

The magician shows a black plastic strip with a white central part. On one black end there is a hole into which a peg (toothpick, match, etc.) is passed. It is unequivocally a real hole! The magician covers the strip with his hand for a moment and, when he removes it, the hole will have passed to the middle of the strip! Again the peg is used to show that it is a real hole!

Then, after a moment, the hole jumps to the other end. And to finish it goes back to the center again (each time the peg is used to show the actual hole). At the end everything can be controlled by the spectators!

- The effect can be repeated.
- Pocket-sized and intriguing. You will always carry it with you.
