

Magic Boat

The performer shows a plastic "rod" and places it on the table. He spins it to show that it turns freely.

Then he rubs it on his sleeve to charge it with electrostatic energy and spins it again. Simply using the strength of his mind he will be able to visibly stop the rod and make it spin in the opposite direction.

- A very simple effect to present and above all to always carry with you.
- The rod is made in plastic, has a length of cm 9.7 (3,81") and is cm 1.8 (0,7") wide.
