

## Dual Prediction

You show four cubes from all sides showing each cube having different color numbers on all sides and a stand to place the four cubes on it. There is a sliding panel in front of the stand, you say that you have already predicted the numbers and colors which the spectators are going to choose!

Request four spectator and let them each choose any number and you place the cube on the stand one by one facing the chosen number in front so that the all the spectators can see. When all is done say that you had already predicted the chosen number by saying so slide the panel in front of the stand and show that your prediction matches with the four chosen number of the cube!

- No force of any kind or what so ever, free selection is done!
- Practical and carefully crafted. It is also perfect for collectors.
- The stand measures 28.8 (11,33") x 5.5 (2,16") x 10.8 (4,25") cm. The cubes measure approximately 5 cm (1,96") per side.
