

Die Through Silk

On the table (or on a tray) there is a silk, with a large die on top. The magician covers the die with an open box and lifts the four corners of the silk as if it were a bag, picking up the die and the box.

A moment later the die visibly melts right through the silk (that naturally will have non hole in it)!

- Intriguing and simple to do.
- Suitable for any type of show.
- The die is made of Plexiglass and measures approximately 8 cm (3,14") on each side.
- The silk is not included. All you need is just a regular 60x60 cm (24") silk.
