

## Blowing Blendo by Vincenzo Di Fatta

The magician shows a tube and puts two small silks of different colors inside. He then brings the tube to his mouth, and blows in it. A large zebra silk with the same colors of the small ones, will magically fly out. The silks will have amazingly blended together! At the end the tube is shown empty.

- All the necessary is made with care and provided in order to present this delightful effect.
- The metal tube is 14 cm (5,5") tall and has a diameter of 3 cm (1,2"). The small silks measure 20 cm (7,9") on each side, while the blendo silk measures 45 cm (17,7").

**WARNING:** For the other two effects shown in the video, you will need two additional silks 20x20 cm (7,9" - red and white) and Confetti (or snowstorm packets), that can be purchased seperately.
