

Beautiful Mirror by Lubor Fiedler and Franz Kaslatter - Buch

"**Beautiful Mirror**" is a personal view of Lubor Fiedler and his work. This is not a reprint of something you already have on your shelf, but a completely new text written by Franz Kaslatter, with well-founded source references based on one of the largest Lubor Fiedler collections in the world. Franz Kaslatter explains his handling of some of Lubor Fiedler's famous tricks and shares his reflections on Lubor Fiedler's way of inventing.

The Austrian magic dealer Tony Reisner brought, over the course of many years, numerous Lubor Fiedler tricks to the magic market. He says: *"Your 'Wunderspiegel' booklet about Lubor Fiedler gave me great pleasure! Although I knew Lubor for decades and he was very often with me in the magic shop, there is still a lot about him in your booklet that was previously unknown to me. Thank you for your efforts!"*

The German magician Reinhard M¹/₄ller, a famous Fiedler expert, is impressed by the booklet: *"I can really recommend this 'Beautiful Mirror', which is dedicated to an extraordinary personality and his amazing, enduring work, to anyone who wants to know who Lubor Fiedler actually was and what he created."*

You get a booklet A4 with 9 paginated pages and additional bonus content. Viennese magician Michael Hitzel, a long-time friend of Lubor Fiedler, praises this booklet as a *"remarkable achievement. An astonishing amount of information about Lubor Fiedler is packed into a manageable number of pages, and much of it was new even to me. For example, the pages from his personal notes offer an insight into Lubor Fiedler's incredible knowledge of the art of magic. Thank you for this special booklet, which I am pleased to say will help to maintain Lubor Fiedler's legacy in the future."* In fact, this booklet contains three original pages from Lubor Fiedler's private notebooks that have never been published before, among other things that will amaze and fascinate you if you are interested in the invention of magic tricks.
