

AI STOUGE by Pavel Bach

Imagine - magician tells a spectator to ask their own ChatGPT to give any random number. It gives, and that's a forced number!

Only Spectator handles the phone, magician doesn't touch the phone and see the screen, and it still works.

AI STOUGE - is a technology, that allows you to take full control under any spectator's ChatGPT behavior in a seconds, and make it act and respond however you need it to for your magic.

This means that you can force items, reveal your forces, add AI to your existed routines and perform original AI routines.

No assistants, no double reality, no shortcuts, magician's phone is not required. Very clean, justified and unexposable method

Can be performed completely "hands-off":

magician doesn't touch the phone, only a spectator handles their own ChatGPT, and magic still works.

What are you capable of with **AI STOUGE**.

10 routines inside:

1. GENERATED LIST FORCE

This is an impromptu force method that can be used to force any item using generated list.

It works on a spectator's ChatGPT, feels as absolutely free choice. You don't need to have anything on you to execute the force. Only a spectator's phone. Works as DFB but with generated list. Magician asks a spectator to choose a number between 1 and 10, spectator says it. Then a spectator's ChatGPT is asked to make a list of 10 random items of something (songs, fruits, cities, celebrities e.t.c.). A Spectator has to remember the one item on their chosen number. And the forced item will be on that number.

2. RANDOMISER FORCE

Magician tells a spectator to ask their own ChatGPT to give them any random number (or random anything you need to force). And ChatGPT gives magician's forced item.

Magician doesn't touch the phone or looks at the screen, but totally controls outcome. Which makes this force feel insanely fair.

Use it to force book page, perform ACAAN, cryptext and so on.

3. ACAAP - Any Card At Any Picture

A spectator asks their own ChatGPT to generate any image with crazy scenario by their choice. While Chat generates an image, a spectator picks a card.

ChatGPT creates a requested image with exactly a spectator's card fitted into composition. Can be done many times in a row.

4. GPT MENTALIST

A spectator shuffles a deck of cards, opens ChatGPT on their phone, and without force picks a random card. Magician asks ChatGPT in a voice mode "what was that card", and ChatGPT answers out loud correctly. Can be repeated as many times as you want.

5. LINES PREDICTION

ChatGPT reveals a spectator's card with an unexpected punch:

A Spectator picks a card and asks their own ChatGPT to read their mind.

ChatGPT gives a response, in which it guesses correctly color, suit and height of card, but doesn't say exactly what it was. When spectator asks "*what was the exact card*", ChatGPT tells to look at the first letter of each line of its previous message. It appears that the card was encrypted in that text, and you see it if look at the text horizontally. This ending makes people's heads explode.

6. PICTURE REVELATION

Cool revelation of any forced item:

Magician gives a spectator to choose something (for example word from a book page), and then tells them to open their own ChatGPT and ask it to read their mind.

ChatGPT generates an image of exactly that thing, that the spectator has chosen.

Magician never touches their phone or sees the screen.

7. MOTHER OF ALL GPT TESTS

Cleanest way ever to perform "Mother of all book tests" method.

A spectator freely chooses any word, then by themselves asks their own ChatGPT to find any text from all the internet about their word. And then, a spectator remembers any word from the given text from ChatGPT. It feels like absolute fair choice with spectator's full control. But magician guesses that word. Magician doesn't touch the phone or look at the screen, only tells them what to do.

8. GPT PALMISTRY

Magician takes a photo of a spectator's palm and sends it to a spectator's ChatGPT.

Then Chat tells fortunes by the palm of a spectators hand, and reveals spectator's star sign, PIN code, age and other info.

9. SYMBOLS PREDICTION

Magician says his prediction: "your card is queen of hearts". Then shows usual deck of hearts, and asks a spectator to tell any number from 1 to 52. For example they say 23.

Magician counts 23 cards, and 23d card is exactly queen of years. But then, magician takes his ChatGPT and asks it to count, how many symbols in a sentence "your card is queen of hearts". And Chat response that there are 23 symbols. Just as spectator just have chosen.

10. PSYCHOLOGICAL PORTRAIT

A spectator's ChatGPT guesses what card did they freely chose without any force.

Magician sends to a spectator's ChatGPT - photo of spectator's face, and asks it to analyze it and make psychological portrait of them. Then, a spectator is told to look at the deck, maybe shuffle, and consciously (without any force) choose any three cards.

Then ChatGPT is asked to guess the first card. And it does it exactly right. And the second card. And the third card.

Moreover, you can customize and adopt AI STOOGES to any routine with AI that you will come up with. Because if ChatGPT is capable of doing something, you can create a magic trick with this.

QUOTES:

"That's soooooo SMART!!!"

- **Les French Twins**

"When you perform a routine with AI STOOGES, it feels like magic even for magician"

- **Marc Oberon**

"Atomic tool for Atomic bomb"

- **Alain Simonov**

"He fooled me with my phone and my ChatGPT. I'm totally blown away"

- **Joshua Jay**

"Great

Phenomenal

Terrific"

- **Dan Hauss**

"I can't believe how easily you can make such impossible effects with AI STOOGES. I'm definitely adding it to my everyday toolkit"

- **Alex Gigauri**
