

Pyro Mini Fireshooter by Adam Wilber

The viral smash-hit of 2014 has been transformed into a smaller, sleeker and sexier MUST-HAVE. Based on the original Pyro, we've refined the mini to make it easier to use, while packing in a host of new features that rival anything you'd see in a James Bond movie. **WHAT'S NEW WITH PYRO MINI?** The dimension of the original Pyro has been reduced by over 50% to create a compact device that's easier to conceal. 2 barrels with intense firepower. Built-in trigger on the top of the device to allow you to shoot a fireball from your hand at the push of a button, now the device is small enough to palm. **NO MORE BATTERIES.** A USB recharging has been added, allowing you to plug in your Pyro to charge up to 600 shots from the in-built lithium battery. Now you can charge it from your laptop, in the car or on your way to a gig. **A DETACHABLE WRIST STRAP** enables you to slide the device on or off with ease. **BURST FIRE** is the most exciting feature has been added. Now you have the option to hold the remote or trigger down for a few seconds and shoot 2 fireballs at the same time. By plugging in your antenna to the remote, you get to practice the new burst fire from up to 30ft away. You can even be in another room. **Comprehensive Instructional** It is a condition of purchase that you watch the PYRO mini instructional in its entirety, prior to operating your unit. Adam Wilber goes over the safety precautions, correct operation and performance ideas for this device. We've given you multiple ideas to get you started - but the possibilities are truly endless. **PYRO mini is a true utility device that opens up a new and exciting side to your magic.** **Multiple Shot Capability** Each PYRO mini unit comes with 2 individually triggered barrels, meaning you can shoot off 2 fireballs before a reload is required. We highly recommend you use only the Flash Packs we supply and recommend, with each pack containing enough flash cotton and paper for over 120 uses. **Handsfree Operation** The PYRO mini Unit itself has been designed to contour to the underside of the wrist, leaving the hand shooting the fireball completely empty. The supplied fastener allows the sleeve to hide the unit, while keeping out of the way of the flaming shots. The remote switch has been designed to fit comfortably and discretely in the other hand, activated with a squeeze of the fist. Small and light enough to sit in a pocket when not in use without you - or your spectators - noticing it's there. **Rugged & Reliable** As soon as you open the box and feel the unit yourself, you can feel the quality and level of R&D that has gone into the production of this device. Over three years of refinements and 11 prototypes, both the PYRO mini Unit and the Remote have gone through hell and back, pressure and temperature stressed every individual component - from heater coil though to remote receiver and cycle tested through

to failure, to guarantee performance and longevity of the final unit. What you have after all of this, is a device that both Ellusionist and Adam Wilber are proud to stand behind.

- Ellusionist quality.
- The flammable material (flash paper/cotton) is included.
- You can download the instruction from internet. We will supply you the link. Even if they are in English, they are clear and easy to follow even for anybody that does not know this language.

NOTE: This is not a toy. This is a "badass" device that allows you to launch fireballs from your open palm. **Your customers must be 18 or over to purchase and/or use the Pyro Mini Device.**
