

Chris Cards Covered Circle GLOW - Pokerdeck

Welcome back to our fourth Kickstarter campaign! We are thrilled to introduce our latest gem - a cardistry deck that pushes the boundaries of visual aesthetics. The UV-luminescent ink transforms every movement into a true work of art.

What you need to know

We offer **2 different decks**: The **Covered Circles** with regular ink and the **Covered Circles Glow UV Edition**, which glows in the dark under UV light and is printed with invisible ink.

Covered Circles Glow (UV Edition)

- **Invisible UV ink** on both sides of the deck.
- **Invisible UV ink** on the tuck.
- Custom backs and faces.
- 300gsm German Black Core Paper.
- Manufactured by WJPC.

Compared to our previous editions, where we only made certain details visible under UV light, we decided to reveal the recognizable features of the faces immediately. This way, the cards can also be used to play without UV light. However, the full beauty of the deck truly comes to life under black light.

Experience the magic of **Chris Cards Covered Circles Glow** with cards made from 300g German playing card paper and an outstanding finish for unparalleled handling! These cards glow under **365nm UV** light and showcase a captivating fan design in daylight. Perfect for Cardistry, card tricks, and collectors. Immerse yourself in the world of Chris Cards and explore the art of gaming in the highest quality!

The best option for representing the light effect is 365nm UV light.
