

## **Schrödinger's Envelopes by Mato & TCC Magic**

**Unveil the Magic of Quantum Mechanics with Schrödinger's Envelopes.**

**Inspired by Schrödinger's Cat paradox, Mato from TCC introduces his idea of card magic.**

**Easy to perform with two stunning effects in one routine.**

**The magician presents a stack of envelopes and invites a spectator to select a card, which is sealed in one of the envelopes. The spectator then freely chooses one of the remaining five envelopes. Incredibly, only the card in the chosen envelope perfectly matches the spectator's selection. For a finale, the magician turns over all five envelopes, showing that a prediction of the selected card is printed: "You will choose the Nine of Clubs."**

**Prepare to astonish your audience with this matching and prediction effect!**

### **Features:**

- **Simple and easy to perform, ideal for beginners.**
- **Free choice by spectators.**
- **No multiple outs.**
- **Envelopes are examinable.**
- **Two effects in one: matching and prediction.**

### **Includes:**

- **11 high-quality envelopes (120g yellow kraft paper).**
- **5 gaff cards (use your own deck to match the faces, normal deck not included).**
