

## Heavy-Duty Steel Ring

Perfect for your Ring-on-Rope routine!

Looking for a prop that combines durability with elegance? This **Heavy-Duty Steel Ring** could be just what you need.

This ring was born out of frustration with the flimsy, lightweight rings that are often sold for Ring-on-Rope routines. I've searched high and low for alternatives. But, after countless hours of research (and a crash course in metal alloys) I took matters into my own hands, and with the help of a manufacturer, I crafted a ring that looks fantastic and is built to last a lifetime.

Made from 8 mm-thick solid stainless steel with an inner diameter of 100 mm (4 inches), this ring weighs in at 125 grams (4.4 oz) - almost three times the weight of most rings this size. The extra weight gives it a satisfying "fall" when tossed onto a rope, bringing momentum that makes each move in your routine look smooth and intentional.

While a seamless finish would have been ideal, this ring comes very close. The joint is welded, ground, and polished to near-invisibility, resulting in a smooth, uninterrupted surface that won't snag on ropes or fingers, so you perform with confidence, focusing on the magic at hand.
