

## Chocolate Forever by Hernan Maccagno

The magician takes a 7 x 9 block plastic chocolate out of a box, removes a piece, rearranges the pieces and the chocolate returns to the same size as before.

This happens 2 more times... in total 3 pieces are removed, and the chocolate never loses its size. As a final surprise, a real chocolate appears inside the box from which the chocolate was taken, so you can eat it and share it.

A perfect game to play at the table with friends. No extra or hidden pieces. Just add a real Kit Kat chocolate and you're ready to enjoy a puzzle, fun and magic.
