

A. I. Deck by Szabolcs Molnar

Artificial intelligence became part of our everyday lives. People talk about it all the time and the possibilities A. I. is giving us.

This is the kind of interest this clever piece of magic is using to get the audience's attention!

A. I. Deck by Szabolcs Molnar gives the illusion that a small computer is hidden in a deck of Bicycle cards. This special deck not only finds the spectator's card by itself, but also gives them humorous instructions.

However there's nothing to be scared of! It uses no electronics whatsoever, all we need is a bit of sleight of hand and some clever little cards to create this modern miracle.
