

InstaCube 2.0 by Zazza

Now you will no longer say “I have nothing with me to show you” because your keys will be enough.. Or rather your keychain.

An effect that you can always carry with you!

It may seem like a simple keychain but in reality it is an NFC TAG that as soon as it is passed on the spectator’s phone will go to your Instagram page!

But it is much more than a digital business card, it is also a Gimmick that will allow you to perform some very powerful effects.

So in addition to making your social networks grow, your name as a Magician will also grow!!!!

Imagine leaving the cube mixed on the keychain in the spectator’s hand, and on the borrowed phone there is a photo in your Instagram identical to the one in the spectator’s hand... and in a few seconds the virtual cube (in the spectator’s phone!) is transformed and obviously also the one on the keychain!!!

Everything can be controlled, also because the phone is not yours

In addition to this, the keychain can be a prediction and a visual resolution for your routine with the Rubik’s cube!

Or even just the simple effect of the keychain that is solved in the spectator’s hand.

And more..

Inside the instructions:

- Gimmick to insert into your instagram and you will be ready forever.
- Instructions for performing the prediction with the Z Solve.
- Video tutorial for writing your NFC.
- Video tutorial 3 routines.
