

Obsidian iOS/Android by Fraser Parker - Zaubertrick mit Phone und App

Imagine the jaws dropping, the eyes widening, the silence as your spectator realizes you have plucked a private thought from their mind without them uttering a single letter. This is not just another app, but a leap forward in real prop-less mentalism-a new way to let intuition guide you while the audience believes it is pure, unexplainable mind reading.

With **Obsidian**, your spectator simply counts silently through the alphabet, focusing on letters only they know, all while you appear as if you are gently drifting into their mental landscape. They never name a single letter. They say nothing. Yet in one elegant moment, you reveal exactly what is on their mind-be it a male or female name, an object, an animal, or a country.

The phone itself remains hidden from view, its powerful search algorithm working stealthily behind the scenes so seamlessly that even you begin to forget technology is helping you. Each subtlety has been perfected: the input is effortless and entirely invisible, so that the device never intrudes upon your performance. You do not look at your phone to operate it; the effect is one of pure telepathic insight.

Obsidian's brilliance is that it leads you to exactly three possible outcomes-but almost always, the first one is the correct one, making your performance smooth and uninterrupted. There is no need to sift through masses of multiple outs or make unnecessary adjustments. It's razor-sharp and frighteningly accurate. Whether you peek on your iPhone or cleverly justify a glance at your smartwatch, the result is the same: absolute certainty, and a performance that feels like genuine, organic mind reading.

This release has been developed over countless hours over months, refined through real-world testing, and it triumphed at the recent convention as the surprise piece everyone wanted. Every detail has been engineered for ease, clarity, and impact-so that you, the performer, can focus entirely on the experience rather than the method. You receive a card, created uniquely for you, with your personal download link and access code. When you receive this package, you'll hold in your hands a tool that elevates your mentalism into that rare space between magic and genuine psychic wonder.

The spectator remains completely silent. They never say a word out loud. They merely focus on their thought, yet you are able to reveal exactly what they are thinking. No long lists of outs. No difficult handling. This is intuitive. This is easy to perform. This is true power in an app.

This is **Obsidian**, a seamless fusion of method and mystery, where cutting-edge technology disappears, and all that remains is pure, impossible mind reading.

Obsidian for iOS and Android currently supports English, French, German, Italian, Spanish, and Portuguese, and is fully compatible with iPhones and Android devices.
